

**AMENDMENTS TO THE SPECIFICATION:**

Please replace [0014] paragraph with the following amended paragraph:

[0014] To prevent rotation of the valve body 10 relative to the pipe 16 upon rotation of the bayonet connector and internal valve mechanism relative to the valve body, an anchor, generally designated 30, is provided. ~~Anchor~~ Figures 1 and 2 illustrate an anchor 30 includes an anchor body 32 comprised of no more than a pair of vertically extending plates 34, 35 and a connecting member 36 (Figure 2). The plates 34, 35 extend in planes generally at right angles to one another. If extended, the planes would intersect along a vertical extending line 38 (Figures 2 and 3). The plates also have a height or depth to width ratio of at least 2:1, with the width dimension being at the widest part of each plate.
